## VLT® AQUA Drive

*The ultimate solution for Water, Wastewater & Irrigation*

**VLT**®  
THE REAL DRIVE

Phone: 800.894.0412 - Fax: 888.723.4773 - Web: [www.ctiautomation.net](http://www.ctiautomation.net) - Email: [info@ctiautomation.net](mailto:info@ctiautomation.net)

# The VLT® AQUA Drive is innovative

– Reduces system, installation and operating costs

**Danfoss VLT® AQUA Drive is dedicated to water and wastewater applications. With a wide range of powerful standard and optional features, the VLT® AQUA Drive provides the lowest overall cost of ownership for water and wastewater applications.**

## **Save energy**

The VLT® AQUA Drive offers considerable energy savings:

- VLT® efficiency (up to 98%)
- Sleep Mode
- Automatic Energy Optimisation AEO: Typically 3-5% energy saving
- Flow compensation, lowering pressure set point and thus energy consumption under low flow conditions

## **Save space**

The compact design of the VLT® AQUA Drive makes it easily fit in even small installation spaces.

- Built-in DC coils for harmonic suppression. No need for external AC coils
- Optional, built-in RFI filters in the whole power range
- Intelligent cooling concept reduces need for installation space.

## **Protects the environment**

The growing need for clean water and energy conservation is rapidly increasing the pressure on global fresh water resources, wastewater treatment, recycling and power generation. VLT® AQUA Drive is designed to enhance system operation, protect equipment, reduce chemical consumption and water loss, while providing significant energy savings. VLT® AQUA Drive is the ultimate solution for all water, wastewater and recycling processes.

## **Save cost and protect your system**

with a series of pump-specific features:

- Cascade controller
- Dry run detection
- End of curve detection
- Motor alternation

- 2-step ramps (initial and final ramp)
- Check valve protection
- Safe stop
- Low flow detection
- Pipe fill mode
- Sleep mode
- Real-time clock
- Password protection
- Overload trip protection
- Smart Logic Controller

Can be set to either variable or constant torque operation in the full speed range.

#### Save panel space

NEMA/UL Type 12 (IP 54/55) enclosure solution is available in the whole power range.

Up to 90 kW, the VLT® AQUA Drive can even be delivered in an IP 66 version.

#### Save time

VLT® AQUA Drive is designed with the installer and operator in mind in order to save time on installation, commissioning and maintenance.

- Intuitive user interface with the award-winning control panel (LCP)
- Same user interface for the full power range
- Modular VLT® design enables fast installation of options
- Auto tuning of PI controllers
- Robust design and efficient monitoring make the VLT® AQUA Drive maintenance free.

#### Dedicated to water and wastewater

Danfoss VLT Drives' unequalled experience was used to make the VLT® AQUA Drive the perfect match for AC motor driven applications in modern water and wastewater systems – also for retrofitting.

Water and Wastewater is a global business area for Danfoss VLT Drives and you will find our dedicated sales and service staff all over the world 24 hours a day.

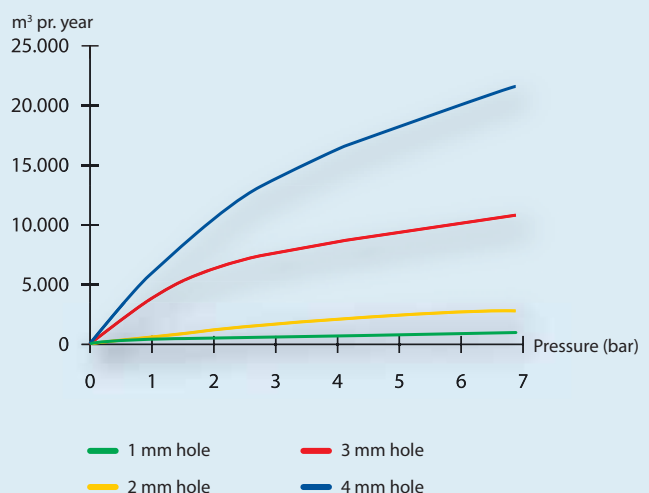

#### Ideal Energy Consumption at Varying Speed

Energy savings using a VLT® AQUA Drive are achieved even with a modest reduction in speed.

#### Distribution System Water Losses

Reducing water losses by lowering system pressure becomes increasingly effective as the size of line breaks increase.

# Water and Wastewater processes

– Improved control using less energy

## **1 Water treatment plants**

Meeting the varying flow demands on a daily or hourly basis requires reliable control. The VLT® AQUA Drive software provides unique pump control features that will help control even the most demanding applications.

## **2 Desalination plants**

Desalination plants are used to provide clean drinking water from sea water or brackish water. In desalination plants saline environments often requires good

protection against corrosion. The optional high grade PCB coating and a mechanical design, which separates the electronics from the cooling air, makes the VLT® AQUA Drive the perfect solution for this application.

## **3 Groundwater pumps**

Submersible deep well pumps need fast start and stop capability, precise control and protection against running dry. The built-in dry run detection and the initial and final ramp ramps make the

VLT® AQUA Drive handle such applications to perfection.

## **4 Wastewater plants**

Fluctuations in flow can disrupt efficient process control, increase costs and equipment wear due to a higher number of starts and stops, and adversely affect effluent quality. Using the VLT® AQUA Drive on pumps, blowers and other equipment will lead to better process control and reduce energy consumption. The VLT® AQUA Drive can also provide

tighter control of chemical feed pumps, mixers and other equipment.

#### **5 Irrigation systems**

The irrigation market is focusing more and more on efficiency and energy savings for water management. Meeting these demands requires precise pressure and flow control. The built-in pump control features makes VLT® AQUA Drive a perfect match for irrigation in rural areas. It even offers a special pipe fill function that prevents water

hammering and reduces leakage when empty pipes are filled.

#### **6 Distribution**

As areas become more populated, the increasing demand for reliable and precise pressure control becomes a challenge to many communities. The VLT® AQUA Drive has innovative pumping functions to assist in maintaining precise pressure and flow while reducing system leakage and energy consumption. In many cases, it can also provide a

cost-effective alternative to water towers. The Cascade Controller has advanced distribution functions built-in.

#### **7 Water fountains and pools**

Water fountains are used to enhance the aesthetics of buildings and parks nearly everywhere. In these applications, the VLT® AQUA Drive can provide energy efficiency, accurate control and even meticulously timed sequencing for a dramatic effect.

# The modular VLT® AQUA Drive

## Extremely compact panel mount cabinets

C3 – frame IP 20 compact panel mounting drive.

Mains and motor cable terminals are located in the bottom of the cabinet for fast and easy installation.

The IP 20 enclosure has two individually controlled fans for maximum reliability.

Only a minimum of external cooling air passes the electronic components, which increases the lifetime.

The aluminium front hinged door ensures easy access to additional I/O options and control wiring.

IP 21/Type 1 protection can be delivered as a kit solution or as a specific IP 21 drive with easy access plastic cover with snap locks.

## Extremely robust cabinets for harsh environments

The Danfoss IP 55/NEMA 12 or IP 66 are designed for use in harsh environments with gas, pollution and dust. The electronics are completely separated from the cooling air in order to increase the lifetime.

All terminals and EMC connections are located inside the drive under the robust metal cover for maximum protection.

If ordered as IP 66 the heat sink is protected against corrosion (IP 66 rating is available up to 90 kW).

### 1 Fieldbus option

- Modbus RTU (std.)
- Modbus TCP IP
- PROFIBUS
- DeviceNet
- EtherNet/IP
- PROFINET

### 2 Local Control Panel (LCP)

Choose numerical, graphical or no display

### 3 I/O option

- General Purpose I/O (3DI + 2AI + 2DO + 1AO)
- Cascade controller (2 – 8 pumps)
- Sensor input (3 x PT100/1000 + 1AI)
- Relay output (3 x relays)

### 4 24 V supply option

### 5 RFI filter

Built-in RFI Filter for long motor cables according to the IEC 61800-3 and EN 55011 standards.

### 6 AC mains disconnect

(Factory mounted option)

### 7 Input mains option

Various input plate configurations are available including fuses, mains switch (disconnect), or RFI filter. Input plates are field adaptable if options need to be added after installation.

### 8 Coated PCB's

#### Durable in aggressive environments

In water and wastewater applications it is often recommended to protect the drive with coated PCB's. As standard the VLT® AQUA Drive complies with level 3C2 according to IEC 60721-3-3. Protection level 3C3 is optionally delivered from factory.

The option protects significantly better against chlorine, hydrogen sulphide, ammonia and other gasses.

**9 Unique cooling concept**

- No ambient air flow over electronics up to 90 kW
- Above 90 kW designed with back channel cooling (85% heat dissipated via back channel)

**10 Advanced cascade controller option**

Controls up to 9 pumps

**VLT® quality up to 1.4 MW**

The VLT® AQUA Drive is available from 0.25 kW to 1.4 MW.

Drive experience since 1968 lies behind the clever design of VLT® drives. All enclosures are mechanically designed with focus on:

- Robustness
- Easy access and installation
- Intelligent cooling
- High ambient temperatures
- Long service life

All VLT® AQUA Drives share technology, user interface and basic features with the rest of the new VLT® generation to assure well documented and proven quality.

The modular design of the VLT® AQUA Drive allows even highly customised drives to be mass produced and factory tested.

Remote access via fieldbus and USB cable. VLT® Set up Software MCT 10 gives intuitive access to all parameters and has scope features with graphs showing feedback, current, frequency etc. for easy fault finding and documentation.

DC coils reduce harmonic noise and protect the drive. Also EMC filters are integrated (meets EN 55011 A2, A1 or B).

# Dedicated water features

## Auto tuning of the PI controllers

With auto tuning of the PI controllers, the drive monitors how the system reacts on corrections made by the drive – and learns from it, so that precise and stable operation is achieved quickly.

Gain factors for PI are continuously changed to compensate for changing characteristics of the loads. This applies to each PI controller in the 4-menu sets individually. Exact P and I settings at start-up will not be necessary – which lowers the commissioning costs.

## Pipe Fill Mode

Enables controlled (closed loop) filling of pipes.

Prevents water hammering, bursting water pipes or blowing off sprinkler heads.

The new pipe fill mode is usable in both vertical and horizontal pipe systems.

Useful in all applications where controlled pipe filling is demanded, such as irrigation systems, water supply systems, etc.

## End of Pump Curve detects breaks and leakage

The feature detects breaks and leakage. End of curve triggers an alarm, shuts off the pump, or performs another programmed action

whenever a pump is found running at full speed without creating the desired pressure – a situation that can arise when a pipe breaks or leakage occurs.

## Check Valve Ramp

The Check Valve Ramp prevents water hammering as the pump stops and the check valve closes.

The Check Valve Ramp slowly ramps down the pump speed around the value where the check valve ball is about to shut.

### Dry Run Detection lowers maintenance costs

The VLT® AQUA Drive constantly evaluates the condition of the pump, based on internal frequency/power measurements.

In case of a too low power consumption – indicating a no or low flow situation – the VLT® AQUA Drive will stop.

### Sleep Mode

Sleep Mode keeps pump wear and power consumption to an absolute minimum. In low flow situations, the pump will boost the system pressure and then stop.

Monitoring the pressure, the VLT® AQUA Drive will restart when the pressure falls below the required level.

### Flow compensation

The flow compensation feature in VLT® AQUA Drive exploits the fact that flow resistance decreases with reduced flow. The pressure set point is accordingly reduced – which saves energy.

### Initial/Final Ramp

The initial ramp provides fast acceleration of pumps to minimum speed, from where the normal ramp takes over. This prevents damage to the thrust bearings on the pump.

The final ramp decelerates pumps from min. speed to stop.

### Payback time indication

One of the major reasons for applying a VLT® drive is the very short payback time due to energy savings. The VLT® AQUA drive comes with a unique feature which continuously shows the remaining payback time for the investment.

### Motor Alternation

This built-in logic controls alternation between two pumps in duty/stand-by applications. Motion of the stand-by pump prevents sticking of the pump. An internal timer assures equal usage of the pumps.

With an option card it is possible to control alternations between 8 pumps.

# Harmonics dissipation solutions for water and wastewater plants

Danfoss understands that water and wastewater treatment plants are frequently significant users of high power drives for pumps, compressors, aerators and so on, which by their very nature can generate substantial harmonic disturbance to the mains supply. This can be exacerbated when the plant is in an isolated location and supplied by a lengthy, high impedance power line. Add to this the fact that such plants also employ a great deal of sensitive electronic equipment such as sensors, telemetry, computer control systems and the like and it becomes clear that water and wastewater plants need drives with the lowest possible harmonic signature.

Danfoss has wide experience of water and wastewater plants across the globe and this is why all Danfoss VLT Drives come with built-in DC-coils to reduce the harmonics interference. In

many cases this is sufficient to avoid voltage pollution but in some cases additional harmonic suppression might be needed due to grid conditions or when multiple drives are installed.

## **Harmonic dissipation solutions**

Where the installation demands it, Danfoss can also offer the most comprehensive range of harmonics dissipation measures.

Passive filtering, especially in the lower power ranges, is a cost-effective method of reducing harmonic corruption of the mains. Danfoss AHF 005 and AHF 010 guarantee total current distortion lower than 5% and 10% respectively. The AHF filter range is both technically and physically, matched to the corresponding VLT® drive to ensure an efficient and compact solution.

Active filtering offers a greater degree of harmonic reduction, down to as low as a few percent. The VLT® Active Filters utilise proven drive technology to switch currents in phase opposition to the harmonic currents, effectively cancelling them out, working in the same way as noise cancelling headphones but on a much higher current level.

Danfoss also offers high power drives with in-built active filtering but a more economic solution on multi-drive sites might be to fit a larger active filter at the point of common coupling and thus provide a comprehensive harmonics dissipation solution for the plant as a whole.

## **Help is available**

Danfoss will, upon request, carry out a full harmonic survey and recommend the most appropriate and most

cost-effective solution for your site, taking into consideration the installed load, the regulatory norms to be met, the diversity factor of your operations and the needs of your installation for a high quality supply. Danfoss also offers free MCT 31 Harmonic Calculation software to help you calculate the harmonics and power quality of your site.

#### Calculate the harmonic disturbance

Free to download, the VLT® Harmonic Calculation Tool MCT 31, is a simple to use, fast and accurate software tool for calculating the harmonic disruption

from your existing or intended drives installation. An accurate assessment is vital as in this case, more is not better, simply more costly, so the MCT 31 can help save money when selecting harmonic mitigation solutions.

The MCT 31 tool can easily be used to evaluate the grid quality and includes specific counter-measures to ease system stress. The power quality impact of electronic devices can be estimated in the frequency range up to 2.5 kHz, depending on the system configuration and standard limits. The analysis

includes indication of compliance with various standards and recommendations.

The Windows-like interface of the MCT 31 tool makes possible intuitive operation of the software. It is built with focus on user-friendliness and the complexity is limited to system parameters that are normally accessible. The Danfoss VLT® frequency converter data is already pre-loaded, allowing fast data entry.

## AQUA users participated in developing the user interface

### 1 Graphical display

- International letters and signs
- Graphical display with bar-charts
- Easy overview
- Possible to select 27 languages
- iF awarded design

### 2 Menu structure

- Based on the well known matrix-system in today's VLT® drives
- Easy shortcuts for the experienced user
- Edit and operate in different set-ups simultaneously

### 3 Other benefits

- Removable during operation
- Up- and download functionality
- IP 65 rating when mounted in a panel door
- Up to 5 different variables visible at a time

### 4 Illumination

- Relevant buttons are illuminated when active

### 5 Quick Menus

- A Danfoss defined Quick Menu
- A personal defined Quick Menu
- A Changes Made menu lists the parameters unique to your application
- A Function Setup menu provides quick and easy set-up for specific applications
- A Logging menu provides access to operation history

### 6 Intuitive functions

- Info ("on board manual")
- Cancel ("undo")
- Alarm log (quick access)

The VLT® AQUA Drive has an award-winning Local Control Panel and a well structured menu system that ensures fast commissioning and trouble-free operation of the many powerful functions.

| T6                  | 3 x 525/600 V AC (1.1 – 90 kW)    |
| T7                  | 3 x 525/690 V AC (45 kW – 1.4 MW) |

## An overview showing the many ways to configure a VLT® AQUA Drive

Select the options required for your application to determine the type code for your drive. The factory then uses this type code to build the drive to your exact specifications.

You can configure online at Danfoss website /drives – choose “Online Configurator” – or contact your local Danfoss VLT Drives office.

| [4] Enclosure         |  |
|-----------------------|--|
| For cabinet mounting: |  |

|                  |  |
|------------------|--|
| E00              | IP 00 (enclosure D3, D4)                               |
| E20              | IP 20 (enclosure A2, A3, B3, B4, C3, C4)               |
| Standalone:      |  |
| E21              | IP 21 (enclosure B1, B2, C1, C2, D1, D2, E, F)         |
| E54              | IP 54 (enclosure D1, D2, E, F)                         |
| E55              | IP 55 (enclosure A4, A5, B1, B2, C1, C2)               |
| E66              | IP 66 (enclosure A4, A5, B1, B2, C1, C2)               |
| Z55              | IP 55 (enclosure A4)                                   |
| Special designs: |  |
| C00              | IP 00 (enclosure E00 – air duct in stainless steel)    |
| P20              | IP 20 (enclosure B4, C3, C4 – Back Plate)              |
| E2M              | IP 21 (enclosure D1, D2 – protective cover)            |
| P21              | IP 21 (enclosure as E21 – Back Plate)                  |
| E5M              | IP 54 (enclosure D1, D2 – protective cover)            |
| P55              | IP 55 (enclosure as E55 – Back Plate)                  |
| E5H              | Special LHD enclosure IP 54 electronic IP 21 magnetics |
| Y55              | IP 55 (enclosure as Z55 – Back Plate)                  |

| [5] RFI Filter (EN/IEC 61800-3) |  |
|---------------------------------|--|
|---------------------------------|--|

|    |   |
|----|---|
| H1 | RFI-Filter Class C1/C2 (enclosure A, B, C)        |
| H2 | RFI-Filter, Class C3 (enclosure A, B, C, D, E, F) |
| H3 | RFI-Filter Class C1/C2 (enclosure A, B, C)        |
| H4 | RFI-Filter, Class C2 (enclosure D, E, F)          |
| H6 | RFI-Filter for Marine                             |
| HX | No RFI-Filter (enclosure A, B, C, 525 – 600 V)    |
| L2 | Low Harmonic Drive with RFI Class C3              |
| L4 | Low Harmonic Drive with RFI Class C2              |
| B2 | 12-pulse with A2 RFI Class C3                     |
| B4 | 12-pulse with A1 RFI Class C2                     |

| [6] Braking & Safety |  |
|----------------------|--|
|----------------------|--|

|   |                          |
|---|--------------------------|
| X | No brake IGBT            |
| B | Brake IGBT mounted       |
| T | Safe stop without brake  |
| U | With brake and Safe Stop |

| [7] Display (Local Control Panel) |  |
|-----------------------------------|--|
|-----------------------------------|--|

|   |                                   |
|---|-----------------------------------|
| X | Blank faceplate, no LCP installed |
| G | LCP 101 – Graphic LCP installed   |
| N | LCP 102 – Numeric LCP installed   |

| [8] Conformal Coating (IEC 721-3-3) |  |
|-------------------------------------|--|
|-------------------------------------|--|

|   |                               |
|---|-------------------------------|
| X | No conformal coating          |
| C | Conformal coating on all PCBs |

| [9] Mains Input |  |
|-----------------|--|
|-----------------|--|

|   |  |
|---|--|
| X | No option                                |
| 1 | Mains disconnect                         |
| 3 | Mains disconnect and fuses               |
| 5 | Mains disconnect, fuses and load sharing |
| 7 | Fuses                                    |
| A | Fuses & load sharing terminals           |
| D | Load sharing terminals                   |

| [10] Cable |  |
|------------|--|
|------------|--|

|   |                        |
|---|------------------------|
| X | Standard Cable Entries |
| O | Metric Cable Entries   |

| [13] A Option (Fieldbus) |  |
|--------------------------|--|
|--------------------------|--|

|    |                         |
|----|-------------------------|
| AX | No fieldbus option      |
| A0 | MCA 101 – PROFIBUS DPV1 |
| A4 | MCA 104 – DeviceNet     |
| AL | MCA 120 – PROFINET RT   |
| AN | MCA 121 – Ethernet I/P  |
| AQ | MCA 122 – Modbus TCP    |

| [14] B Option (Application) |  |
|-----------------------------|--|
|-----------------------------|--|

|    |                                       |
|----|---------------------------------------|
| BX | No application option                 |
| BK | MCB 101 – General Purpose I/O         |
| BP | MCB 105 – Relay Expansion             |
| B0 | MCB 109 – Analog I/O                  |
| B4 | MCB 114 – Sensor Input Option         |
| BY | MCO 105 – Extended Cascade Controller |

| [16] C1 Option (Extended Relay) |  |
|---------------------------------|--|
|---------------------------------|--|

|   |                                       |
|---|---------------------------------------|
| X | No application option                 |
| 5 | MCO 102 – Advanced Cascade Controller |

| [18] D Option (Control Power Backup Input) |  |
|--|--|
|--|--|

|    |                             |
|----|-----------------------------|
| DX | No DC input installed       |
| D0 | MCB 107 24 VDC backup input |

Please beware that not all combinations are possible. Find help configuring our drive with the online configurator found under: driveconfig at Danfoss website.

# Specifications

## Mains supply (L1, L2, L3)

|   |  |
|---|--|
| Supply voltage                          | 1 or 3 x 200 – 240 V $\pm 10\%$<br>1 or 3 x 380 – 480 V $\pm 10\%$<br>3 x 525 – 600 V $\pm 10\%$<br>3 x 525 – 690 V $\pm 10\%$ |
| Supply frequency                        | 50/60 Hz   |
| True power factor ( $\lambda$ )         | $\geq 0.9$   |
| Switching on input supply<br>L1, L2, L3 | 1-2 times/min.   |

## Output data (U, V, W)

|                     |                            |
|---------------------|----------------------------|
| Output voltage      | 0 – 100% of supply voltage |
| Switching on output | Unlimited                  |
| Ramp times          | 1 – 3600 sec               |
| Closed loop         | 0 – 132 Hz                 |

VLT® AQUA Drive can provide 110% current for 1 minute.  
Higher overload rating is achieved by oversizing the drive.

## Digital inputs

|                             |            |
|-----------------------------|------------|
| Programmable digital inputs | 6*         |
| Logic                       | PNP or NPN |
| Voltage level               | 0–24 V     |
| Thermistor inputs           | 1          |

\*2 can be used as digital outputs

## Analog input

|               |                         |
|---------------|-------------------------|
| Analog inputs | 2                       |
| Modes         | Voltage or current      |
| Voltage level | 0 – 10 V (scaleable)    |
| Current level | 0/4 – 20 mA (scaleable) |

## Pulse inputs

|                                    |                               |
|------------------------------------|-------------------------------|
| Programmable pulse inputs          | 2                             |
| Voltage level                      | 0-24 VDC (PNP positive logic) |
| Pulse input accuracy               | (0.1 – 110 kHz)               |
| Utilize some of the digital inputs |                               |

## Analog output

|                                |             |
|--------------------------------|-------------|
| Programmable analog outputs    | 1           |
| Current range at analog output | 0/4 – 20 mA |
| Max. load (24 V)               | 130 mA      |

## Relay outputs

|   |   |
|---|---|
| Programmable relay outputs<br>(240 VAC, 2 A and 400 VAC, 2 A) | 2 |
|---|---|

## Fieldbus communication

|   |  |
|---|--|
| Standard built in:<br>FC Protocol<br>Modbus RTU | Optional:<br>PROFIBUS<br>DeviceNet<br>EtherNet/IP<br>Modbus TCP IP<br>PROFINET |
|---|--|

## Temperature

|                     |             |
|---------------------|-------------|
| Ambient temperature | Up to 55° C |
|---------------------|-------------|

## Application options

A wide range of integrated water application options can be fitted into the drive:

- **Real time clock with battery back-up**
- **General purpose I/O option:**  
3 digital inputs, 2 digital outputs, 1 analog current output, 2 analog voltage inputs
- **Relay option/cascade controller option:**  
3 relay outputs
- **External 24 VDC supply option:**  
24 VDC external supply can be connected to supply control and option cards
- **Brake chopper option:**  
Connected to an external brake resistor, the brake chopper limits the load on the intermediate circuit in case the motor acts as generator.
- **Extended cascade control of up to a total of 6 pumps**
- **Advanced cascade control of up to a total of 9 pumps**
- **Analogue sensor input option with up to 3 temperature sensor inputs**

## Power options

Danfoss VLT Drives offers a wide range of external power options for use together with our drive in critical networks or applications:

- **Advanced Harmonic Filters:** for applications where reducing harmonic distortion is critical
- **dU/dt filters:** For providing motor isolation protection
- **Sine filters (LC filters):** For noiseless motor

## Complementary products

- A broad range of soft starters
- Decentral drive solutions

## PC software

- **MCT 10**  
Ideal for commissioning and servicing the drive including guided programming of cascade controller, real time clock, smart logic controller and preventive maintenance. The software is available for free on Danfoss website
- **VLT® Energy Box**  
Comprehensive energy analysis tool, shows the drive payback time
- **MCT 31**  
Harmonics calculations tool

**Sales and Service Contacts worldwide Find your local expert team on Danfoss website /drives**

- 24/7 availability
- Local service organisation is present in more than 100 countries – ready to support whenever and wherever you need, around the clock, 7 days a week.

# Connection examples

The numbers represent the terminals on the drive

This diagram shows a typical installation of the VLT® AQUA Drive. Power is connected to the terminals 91 (L1), 92 (L2) and 93 (L3) and the motor is connected to 96 (U), 97 (V) and 98 (W).

Terminals 88 and 89 are used for load sharing between drives. Analogue inputs can be connected to

the 53 (V or mA), 54 (V or mA) terminals.

These inputs can be set up to either reference, feedback or thermistor. There are 6 digital inputs to be connected to terminals 18, 19, 27, 29, 32, and 33. Two digital input/output terminals (27 and 29) can be set up

as digital outputs to show an actual status or warning. The terminal 42 analogue output can show process values such as  $0 - I_{max}$ .

On the 68 (P+) and 69 (N-) terminals' RS 485 interface, the drive can be controlled and monitored via serial communication.

# Proven AQUA Experience – world wide

## **Freshwater supply for the city Novi Sad, Serbia**

In the city of Novi Sad in Serbia, Danfoss VLT Drives has installed 5 x 315 kW VLT® AQUA Drives in JKP Vodovod. The company JKP Vodovod is using water from the Danube River and after purification it is provided to people of Novi Sad and local area which counts around 350,000 inhabitants. Before investments they used an old regulation with valves and there was no central monitoring of the water system. Poor regulation and high maintenance costs have forced local management for investments. Now they have seen huge savings in electrical energy, even within a short period of usage.

## **VLT® drives make 70 billion litres of Sydney's wastewater drinkable**

Authorities in Australia hope to recycle 70 billion litres of Sydney's wastewater every year by 2015 – and Danfoss is playing a key role in helping them hit this ambitious target. Danfoss VLT Drives will deliver 11 x 200 – 400 kW High Power drives and AHF filters for the Western Sydney Replacement Flows Project. The Aus \$250 million project is Sydney's largest water recycling scheme and is a key part of the state's Metropolitan Water Plan.

## **Changi Water Reclamation Plant, Singapore**

The Changi Water Reclamation plant is the cornerstone of the first phase of the Singapore Deep Tunnel Sewerage System. The plant is to replace six existing water reclamation plants in the long term. Danfoss VLT® drives and AHF filters were supplied for chemical and carbon scrubbers for the odour control, sedimentation tanks, bio-reactors, sedimentation tanks and solids building.

## **Perth Seawater Desalination Plant, Australia**

VLT® drives and soft starters were chosen to run pumps when The Water Corporation of Western Australia – one of Australia's largest and most successful water service providers – invested \$387 million Australian dollars in Perth Seawater Desalination Plant – the largest of its type in the Southern Hemisphere. The company provides water and wastewater services to the burgeoning city of Perth and hundreds of towns and communities spread over 2.5 million square kilometres.

## **Wastewater Pumping in Cartagena, Colombia**

Huge energy savings and a significant carbon reduction were achieved in the preliminary water treatment stage, where solids are separated from the sewage inflow. By applying Danfoss VLT® AQUA Drives to control the levels in the holding tanks, variable speed operation of the 4 x 370 kW pumps realised a return on investment within 6 months, and ongoing energy and carbon savings for the future. The additional operation result is a more constant flow through the subsequent processes, improving overall process efficiency

## **Xi'an No.3 Waste Water treatment, China**

Danfoss provided VLT® AQUA drives and MCD soft starters for Xi'an No.3 Wastewater treatment plant. It is one of three bundles of a retrofit project to improve the environment in Xi'an City of Shanxi province, China. The treatment capacity is 100,000 tons of sewage and 50,000 tons of recycled water per day.

## **Athens Wastewater Treatment Plant, Greece**

VLT® drives up to 315 kW handle wastewater from a population of 5 million in Athens. VLT® operation saves approx. 25% energy. The Psytalia Wastewater Treatment Plant treats daily 750,000 m³ of sewage and has a nominal daily capacity of 1,000,000 m³.

## **Vienna's Main Sewage Treatment Plant, Austria**

At Vienna's lowest point, where the Danube Canal meets the Danube, lies Vienna's Main Sewage Treatment Plant. Here around 90% of Vienna's wastewaters is purified. VLT® drives were chosen to operate the pumps that handle more than 500,000 cubic metres per day, which corresponds to a flow of a medium-size river.

## **Izmir Geothermal District Heating System, Turkey**

VLT® drives operate the deep well and supply pumps in Izmir geothermal district heating. Applying VLT® drives leads to a very low electricity cost.

# 1 x 200 – 240 VAC and 1 x 380 – 480 VAC

## 1 x 200 – 240 VAC

Typecode Position

## VLT® PROFIBUS DP V1 MCA 101

- PROFIBUS DP V1 gives you wide compatibility, a high level of availability, support for all major PLC vendors, and compatibility with future versions
- Fast, efficient communication, transparent installation, advanced diagnosis and parameterisation and auto-configuration of process data via GSD-file
- A-cyclic parameterisation using PROFIBUS DP V1, PROFIdrive or Danfoss FC profile state machines, PROFIBUS DP V1, Master Class 1 and 2

Ordering number 130B1100 uncoated – 130B1200 coated (Class 3C3/IEC 60721-3-3)

13

## VLT® DeviceNet MCA 104

- This modern communications model offers key capabilities that let you effectively determine what information is needed and when
- You will also benefit from ODVA's strong conformance testing policies, which ensure that products are interoperable

Ordering number 130B1102 uncoated – 130B1202 coated (Class 3C3/IEC 60721-3-3)

13

## VLT® PROFINET RT MCA 120

The VLT® PROFINET Option offers connectivity to PROFINET based networks via the PROFINET Protocol. The option is able to handle a single connection with an Actual Packet Interval down to 1 ms in both directions, positioning it among the fastest performing PROFINET devices in the market.

- Built-in web server for remote diagnosis and reading out of basic drive parameters
- An e-mail notifiicator can be configured for sending an e-mail message to one or several receivers, if certain warnings or alarms occur, or have cleared again
- TCP/IP for easy access to Drive configuration data from MCT 10
- FTP (File Transfer Protocol) file up- and download
- Support of DCP (discovery and configuration protocol)

13

## VLT® EtherNet IP MCA 121

EtherNet will become the future standard for communication at the factory floor. The EtherNet Option is based on the newest technology available for the Industrial use and handles even the most demanding requirements. EtherNet/IP extends commercial off-the-shelf EtherNet to the Common Industrial Protocol (CIP™) – the same upper-layer protocol and object model found in DeviceNet.

The VLT® MCA 121 offers advanced features as:

- Built-in high performance switch enabling line-topology, and eliminating the need for external switches
- Advanced switch and diagnoses functions
- Built-in web server
- E-mail client for service notification

13

## VLT® Modbus TCP MCA 122

The VLT® Modbus Option offers connectivity to Modbus TCP based networks, such as Groupe Schneider PLC system via the Modbus TCP Protocol. The option is able to handle a single connection with an Actual Packet Interval down to 5 ms in both directions, positioning it among the fastest performing Modbus TCP devices in the market.

- Built-in web-server for remote diagnosis and reading out basic drive parameters
- An e-mail notifiicator can be configured for sending an e-mail message to one or several receivers, if certain warnings or alarms occur, or have cleared again
- Two Ethernet ports with built-in switch
- FTP (File Transfer Protocol) file up- and download
- Protocol – automatic – IP address configuration

13

Installation of options is a matter of plug-and-play

# VLT® AQUA Drive Accessories

## Profibus Adapter Sub-D9 Connector

The adapter makes linking of fieldbus connections pluggable. For use with option A.

- Option to use prefabricated Profibus cabling
- For retrofit

Ordering number 130B1112 for frame size A, B and C  
Ordering number 176F1742 for frame D and E

## Screw terminals

Screw terminals as an alternative to the standard springloaded terminals.

- Pluggable
- Terminal name is described

Ordering number 130B1116

## IP 21/Type 12 (NEMA1) Kit

The IP 21/Type 12 (NEMA1) kit is used for installation of VLT® drives in dry environments.

The enclosure kits are available for frame sizes A1, A2, A3, B3, B4, C3 and C4

- Supports VLT® drives from 1.1 to 90 kW
- Used on standard VLT® drives with or without mounted option modules
- IP 41 on top side
- PG 16 and PG 21 holes for glands

130B1122 for frame size A2, 130B1123 for frame size A3, 130B1187 for frame size B3, 130B1189 for frame size B4, 130B1191 for frame size C3, 130B1193 for frame size C4

## Kit for panel through mount

Mounting kit for external cooling of the heatsink for appliances with A5, B1, B2, C1 and C2 housing.

- The air conditioned installation space can be reduced.
- Additional cooling may be omitted
- No contamination of electronics by forced ventilation
- Facilitates integrated assembly
- Reduced cabinet depth/less space

## VLT® Brake Resistors

Energy generated during braking is absorbed by the resistors, protecting electrical components from heating up. Danfoss brake resistors cover the full power range.

- Quick braking of heavy loads
- Braking energy is only absorbed into the brake resistor
- External mounting makes it possible to use the generated heat
- All necessary approvals are available

## USB Extension

USB extension for IP 55 and IP 66 enclosures. Makes the USB connector available outside the drive. The USB extension is designed for mounting in a cable gland in the bottom of the drive, which makes PC communication very easy even in drives with high IP rating.

USB extension for A5-B1, D and E enclosures, 350 mm cable, ordering number 130B1155

USB extension for B2-C enclosures, 650 mm cable, ordering number 130B1156

USB extension for F enclosures, ordering number 176F1784

# VLT® AQUA Drive Accessories

## VLT® Advanced Harmonic Filters – AHF 005/AHF 010

The Danfoss Advanced Harmonic Filters have been specially designed to match the Danfoss frequency converters. The solution is available in two variants, a AHF 005 and AHF 010 and connected in front of a Danfoss frequency converter, the harmonic current distortion generated back to the mains is reduced to 5% and 10% Total Harmonic Current Distortion at full load.

- Electrically matched to the individual VLT® FC-drives
- >98% efficiency
- Side-by-side mounting with VLT®
- Optimized for mounting in panels
- Easy to use in retrofit applications
- Easy commissioning
- Robust solution that require no routine maintenance
- IP 00 and IP 20 (IP 21/NEMA 1 kit optional)

## VLT® Sine-Wave Filters – MCC 101

Sine-Wave filters are placed between the frequency converter and the motor.

They are low-pass filters that suppress the switching frequency component from the frequency converter and smooth out the phase-to-phase output voltage of the frequency converter to become sinusoidal. This reduces the motor insulation stress, bearing currents and eliminates the switching acoustic noise from the motor.

- Mechanically and electrically matched to the individual VLT® FC-drives
- Eliminates over-voltages and voltage spikes caused by cable reflections
- Protects the motor insulation against premature aging
- Reduces electromagnetic interference by eliminating pulse reflection caused by current ringing in the motor cable. This allows the use of unshielded motor cables in some applications.
- Reduces high frequent losses in motor
- Applications with longer motor cables (>150 m)
- Side-by-side mounting with VLT®
- IP 00 and IP 20 (IP 23 above 115 A)

## VLT® du/dt Filters – MCC 102

du/dt filters are placed between the frequency converter and the motor. They are differential-mode filters which reduce motor terminal phase-to-phase peak voltages spikes and reduce the rise time to a level that lowers the stress on the insulation of motor windings. du/dt filters are smaller, weigh less and have a lower price compared to sine-wave filters.

- Mechanically and electrically matched to the individual VLT® FC-drives
- Due to low voltage drop du/dt filters are ideal for highly dynamic applications with flux vector regulation
- Dampen the ringing oscillations at the motor terminals and reduces risk of double pulsing and voltage peaks
- Applications with short motor cables (up to 150 m)
- Side-by-side mounting with VLT®
- IP 00 and IP 20 (IP 23 above 115 A)

## VLT® Common Mode Filters – MCC 105

Common mode filters are placed between the frequency converter and the motor. They are nano-crystalline cores that mitigate high frequency noise in the motor cable (shielded or unshielded) and reduce bearing currents in the motor.

- Extends motor bearing lifetime
- Can be combined with du/dt and Sine-Wave filters
- Reduces radiated emissions from the motor cable
- Easy to install – no adjustments necessary
- Oval shaped – allows mounting inside the frequency converter enclosure or motor terminal box
- No maintenance required

## Environmentally responsible

VLT® products are manufactured with respect for the safety and well-being of people and the environment.

All activities are planned and performed taking into account the individual employee, the work environment and the external environment. Production takes place with a minimum of noise, smoke or other pollution and environmentally safe disposal of the products is pre-prepared.

### UN Global Compact

Danfoss has signed the UN Global Compact on social and environmental responsibility and our companies act responsibly towards local societies.

### EU Directives

All factories are certified according to ISO 14001 standard. All products fulfil the EU Directives for General Product Safety and the Machinery directive. Danfoss VLT Drives is, in all product series, implementing the EU Directive concerning Hazardous Substances in Electrical and Electrical Equipment (RoHS) and is designing all new product series according to the EU Directive on Waste Electrical and Electronic Equipment (WEEE).

### Impact on energy savings

One year's energy savings from our annual production of VLT® drives will save the energy equivalent to the energy production from a major power plant. Better process control at the same time improves product quality and reduces waste and wear on equipment.

# What VLT® is all about

*Danfoss VLT Drives is the world leader among dedicated drives providers – and still gaining market share.*

### Dedicated to drives

Dedication has been a key word since 1968, when Danfoss introduced the world's first mass produced variable speed drive for AC motors – and named it VLT®.

Twenty five hundred employees develop, manufacture, sell and service drives and soft starters in more than one hundred countries, focused only on drives and soft starters.

### Intelligent and innovative

Developers at Danfoss VLT Drives have fully adopted modular principles in development as well as design, production and configuration.

Tomorrow's features are developed in parallel using dedicated technology platforms. This allows the development of all elements to take place in parallel, at the same time reducing time to market and ensuring that customers always enjoy the benefits of the latest features.

### Rely on the experts

We take responsibility for every element of our products. The fact that we develop and produce our own features, hardware, software, power modules, printed circuit boards, and accessories is your guarantee of reliable products.

### Local backup – globally

VLT® motor controllers are operating in applications all over the world and Danfoss VLT Drives' experts located in more than 100 countries are ready to support our customers with application advice and service wherever they may be.

Danfoss VLT Drives experts don't stop until the customer's drive challenges are solved.
