

E5_C TEMPERATURE CONTROLLER

High performance with simplicity

SimpleType

New Models with Communications and Other Features

- » Easy set-up and operation
- » High-contrast display
- » DIN-Track mounting type joined the lineup

The New E5CC, E5CC-U, E5EC, E5AC, and E5DC Next-generation Digital Controllers with Advanced Designs and Easy Operation

White PV display and new LCD with greatly improved visibility.*

*100 times higher contrast ratio than the E5□Z.

A compact body with large display characters for easy reading even from a distance. This helps to reduce human error.

The white LCD display is easy to read in the subdued lighting conditions.

The display remains easy to read even from wide viewing angles.

The E5CC, E5EC, and E5AC cover a wide range of applications.

Packaging machine (E5CC)

High-speed PID control: Sampling period of 50 ms
Upper/lower limit alarms: Two auxiliary outputs

Molding machine (E5EC)

Heating/cooling control: Independent PID control
Upper/lower limit alarms: Two auxiliary outputs

Continuous Combustion furnaces (E5EC/E5AC)

Motor-operated valve control: Position-proportional control
(Floating control is also possible.)

SimpleType

Save space!

The compact and space-saving design of the new E5CC/E5EC/E5AC controller generation requires less space behind the panel (60 mm), allowing quick snap-mounting and easy installation even under very cramped conditions.*

*Excluding E5CC-U and E5DC

Save Time!

The E5CC/E5CC-U/E5EC/E5AC/E5DC series is extremely easy to operate using the instrument's five front keys.

Five front keys

Units digit setting

Push the shift key

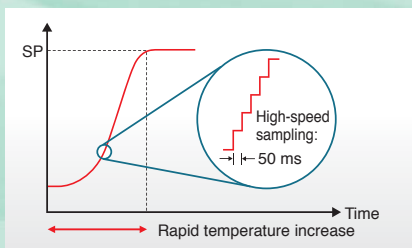

Tens digit setting

Smart!

With key features like simplicity in operation, Omron's patented PID control, and 50ms sampling period, the E5CC/E5CC-U/E5EC/E5AC/E5DC sets a new standard in fast and precise temperature regulation.

Sampling period:50ms

Sampling Rate Sufficient to Handle Rapid Increases in Temperature

Independent heating/cooling PID

The heating and cooling PID can each be set individually. Also, autotuning (AT) will automatically set the PID constants.

Setting change protection

You can disable key operations to help prevent incorrect setting change.

A key icon is displayed when setting change protection is enabled.

Easy connections to a PLC with programless communications.

More Convenient Operations

The parameters can be copied from the master Temperature Controller to slave Temperature Controllers.

Advantages

- The amount of work to set up the system is greatly reduced. PLC programming and memory are not required for communications.
- Communications even with multiple Temperature Controllers are automatically executed by the Temperature Controllers.
- Interface converters are not required, which reduces costs.
- Number of connected Digital Temperature Controllers: 32 max. (Up to 16 for the FX Series)

Master Temperature Controller can share RUN/STOP operations and set points with slave Temperature Controllers. Slope and offsets can be set for the set point.

Note: A Temperature Controller with version 1.1 or higher is required.
A Temperature Controller with version 2.1 or higher is required for the FX Series.

The New E5DC with DIN-Track Mounting Capability Joins the E5_C Series, Next-generation Temperature Controllers. The E5DC Inherits the Features of the E5_C Series.

- Provides the unified design, operability, and functions of the E5_C Series.
- Width of 22.5 mm and mounts to DIN Track.
- On-panel mounting is also possible. (Mounting Adapter required; sold separately.)

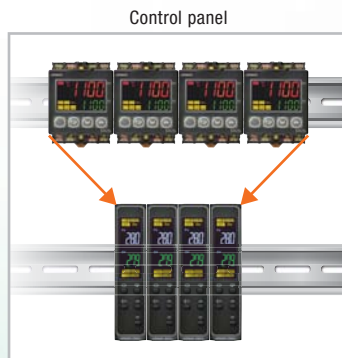

Contributes to Machine Downsizing

The E5DC is only 22.5 mm wide and enables to install multi channel controls in limited space.

Previously

E5DC
Requires only half the space.

The E5DC has a short body of only 85 mm in depth for easy mounting in control panels with 120-mm depths.

Removable Terminal Block for Easy Mounting and Replacement.

Removing from the Terminal Block
The image is for illustration purpose only.

* Hooks must be pressed to remove from the terminal block.

The E5DC cover a wide range of applications.

Packaging machine (E5DC)

High-speed PID control: Sampling period of 50 ms
Upper/lower limit alarms: Two auxiliary outputs

*1. The control output can be used as a simple transfer output for the Digital Temperature Controllers manufactured in July 2014 or later.

*2. Option 000 can be selected only if two auxiliary outputs are selected.

Options 002 and 017 can be selected only if the control output is a relay output or voltage output and two auxiliary outputs are selected.

Option 015 cannot be selected if the control output is a relay output or voltage output and two auxiliary outputs are selected.

Options 016 can be selected only if the control output is a linear current output and two auxiliary outputs are selected.
